December 05 1

Identity Based Video Indexing

- Scanning, identifying and tracking individuals, appearing in video images and creating an index for each scanned video.

- Advanced data-fusion and tracking capabilities help solve ambiguities and overcome temporary identification gaps.
- Optimization of the process is possible, based on the availability of meta data concerning the relevant videos/cameras

The Technology

- The result of an R&D collaboration funded by the Singapore-Israel Industrial R&D Foundation (SIIRD).
- Based on the successful integration of Real World Face Recognition technologies and Advanced Data Fusion and Tracking capabilities.

Correlation Systems wishes to join a consortium in order to incorporate this technology in the next generation of search engines.
