Research laboratory oriented toward study of complex systems with high publication rate and solid roots in modern technology and methods taught in class.

Graduate school of IST engineering with three majors :
Embarked systems ; Telecommunications networks;
Information Systems, with large system programming/
computing and good quality of students available for
studies during their PFE

LACSC/ECE

Very active contacts for several years with broad range of companies looking for project system engineers. No experience in R&D European programmes as very newly created.

Ability to run a project related to IST with special emphasis on complex system aspect, expertise in broad range of theoretical and technical aspects related to the three majors all together (very rare) and large qualified manpower for executing computing and technical electronic works.
